Education

University of Virginia — Charlottesville, VA
Bachelor's in Computer Science — *Expected December 2027*

- Relevant Coursework: Data Structures, Algorithms, Low Level Computing, Operating Systems, Software Engineering, Machine Learning, Game Design, Cloud Computing, Discrete Mathematics, Linear Algebra

Experience

Undergraduate Research Assistant — Oct. 2026 – Present
University of Virginia — *Charlottesville, VA*

- Investigating LLM-based knowledge tracing to determine whether AI-assisted writing conversations can reveal students' independent writing proficiency.
- Developing a Python evaluation pipeline to benchmark LLM assessments of persuasive essays against human graders using standardized Virginia SOL rubrics.

Deep Learning Research Intern — Jan. 2024 – Jul. 2024
George Mason University — *Fairfax, VA*

- Developed and evaluated convolutional neural networks using PyTorch for image segmentation and classification of Arctic geographic images
- Achieved 97% classification accuracy through model experimentation, hyperparameter tuning, data augmentation, and validation testing
- Developed and maintained a Django web application, implementing backend functionality, enhancing the user interface, and integrating Amazon S3 cloud storage

Data Structures & Algorithms Tutor — Oct. 2023 – Dec. 2024
Northern Virginia Community College / Online — *Northern Virginia*

- Tutored students in object-oriented programming, data structures, algorithms, and debugging through individualized lessons and programming exercises

Projects

FraudMail | *Django, Scikit-learn, Tesseract OCR, Google Colab* — View Project

- Developed a full-stack phishing detection web application using Django, HTML, CSS, and JavaScript to analyze email and message screenshots
- Trained a Logistic Regression classifier on preprocessed phishing datasets, achieving 98.39% accuracy on 16,416 test samples
- Built an OCR-to-classification pipeline using Tesseract to extract text from screenshots and generate phishing predictions

RockBlaster | *Lua, PICO-8, Game Development* — View Project

- Developed a 2D arcade shooter in Lua using PICO-8, implementing custom sprites, projectile mechanics, collision detection, and randomized asteroid spawning

JasonChat | *Python, Django, Django Channels, WebSockets, Redis, SQLite* — View Project

- Developed a real-time messaging application using Django Channels and WebSockets, supporting private messaging and group chats
- Implemented Google OAuth 2.0 authentication, customizable profiles, typing indicators, message editing and deletion, search functionality, and read receipts
- Integrated Redis as a channel layer to enable real-time message delivery across concurrent WebSocket connections, with persistent chat histories stored in SQLite

Technical Skills

Languages: Python, Java, C, HTML, CSS, JavaScript, SQL, Lua, Assembly

Frameworks & Libraries: Django, Django Channels, Pandas, PyTorch, Scikit-learn

Tools & Technologies: Git, GitHub, Linux/Unix, SQLite, Redis, Amazon S3, REST APIs, WebSockets, OAuth 2.0, Tesseract OCR, PICO-8, Godot
